

# QWIK TUNE®

## QT-12 Instructions

1. Press **ON**.
2. Hold the instrument so the sound source is within 4-8 inches (100-200mm) of the **"MIC"** hole on the front of tuner.
3. Play any note. The note being tuned will show at the top of the LCD meter.
4. While tuning, if the needle stops to the left of "0" the pitch of the note is flat (♭). Adjust instrument. Play note again. Repeat until the meter needle lines up directly over the "0" on the meter. The note is then in tune.
5. If the needle stops to the right of the "0" the pitch of the note is sharp (#). Adjust instrument. Play note again. Repeat until the meter needle lines up directly over the "0" on the meter.
6. The 3 LED's will light as follows:
  - **RED** ◀ The note is -1 to -50 cents below correct pitch.
  - **GREEN** ● The note is in tune.
  - **RED** ▶ The note is +1 to +50 cents above correct pitch.If the ◀ LED lights, follow instructions in no. 4 above.

- If the ► LED lights, follow instructions in no. 5 above.
- If the note is greater than -50 or +50 cents from true pitch, adjust instrument until one of the LED's lights up.
  - The QWIK TUNE® is more sensitive and the meter is faster acting than some other chromatic tuners. On some instruments the needle on the LCD meter may move rapidly from one reading to another. If this happens, try playing the note more lightly. Also, when tuning an instrument, make sure there is no background noise in the room (voices, other musical instruments, radio, etc.)
  - When LCD becomes faint, replace batteries with 2 AAA batteries.
  - After 2 minutes of non use, QWIK TUNE® will automatically shut off to save battery power.
  - The **ELECTRONIC PITCH PIPE** is activated by the small button to the left of the **ON/OFF** button. Press once and you will hear the C tone. Press again for C#, D, D#, E, F, F#, G, G#, A, A# and B tones. Press again to turn off. These tones can be used as a tuning reference to tune severely out of tune instruments.

Enjoy your music!
